

VPN access using the Cisco Anyconnect client

Only Windows versions 7, 8.1 and 10 are allowed to connect to the TDCJ network. XP is not allowed.

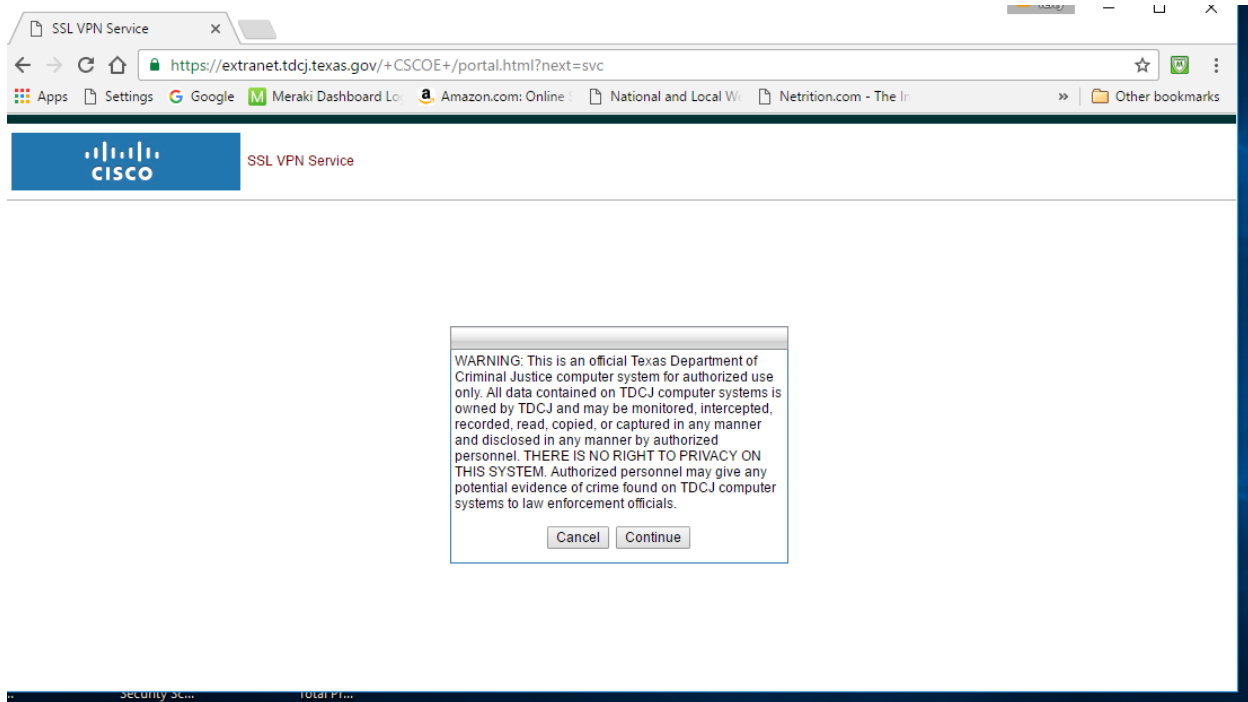

If you do not have the Anyconnect client already, you can download it by going to:

<https://extranet.tdcj.texas.gov>

You will be asked to login when you see a screen like this.

After you successfully log in you need to click continue after this banner page.

You will be asked to download and install the client.

NOTE: You must have administrator privileges to install the client.

Installation x

If the auto install fails you may need to click the link to install from Cisco. Click the link that says Anyconnect VPN in blue.

## AnyConnect Secure Mobility Client

### WebLaunch

- Platform Detection
- ActiveX
- Java Detection
- Java
- Download
- Connected

### Manual Installation

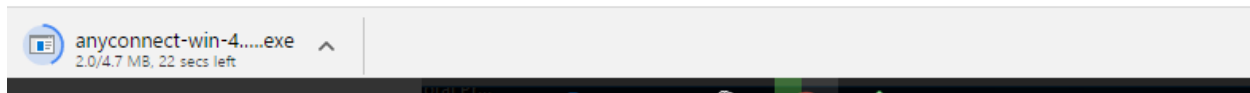

Web-based installation was unsuccessful. If you wish to install the Cisco AnyConnect Secure Mobility Client, you may download an installer package.

Install module(s) below in the listed sequence.  
Platforms supported: Windows 7 SP1 or newer

[AnyConnect VPN](#)

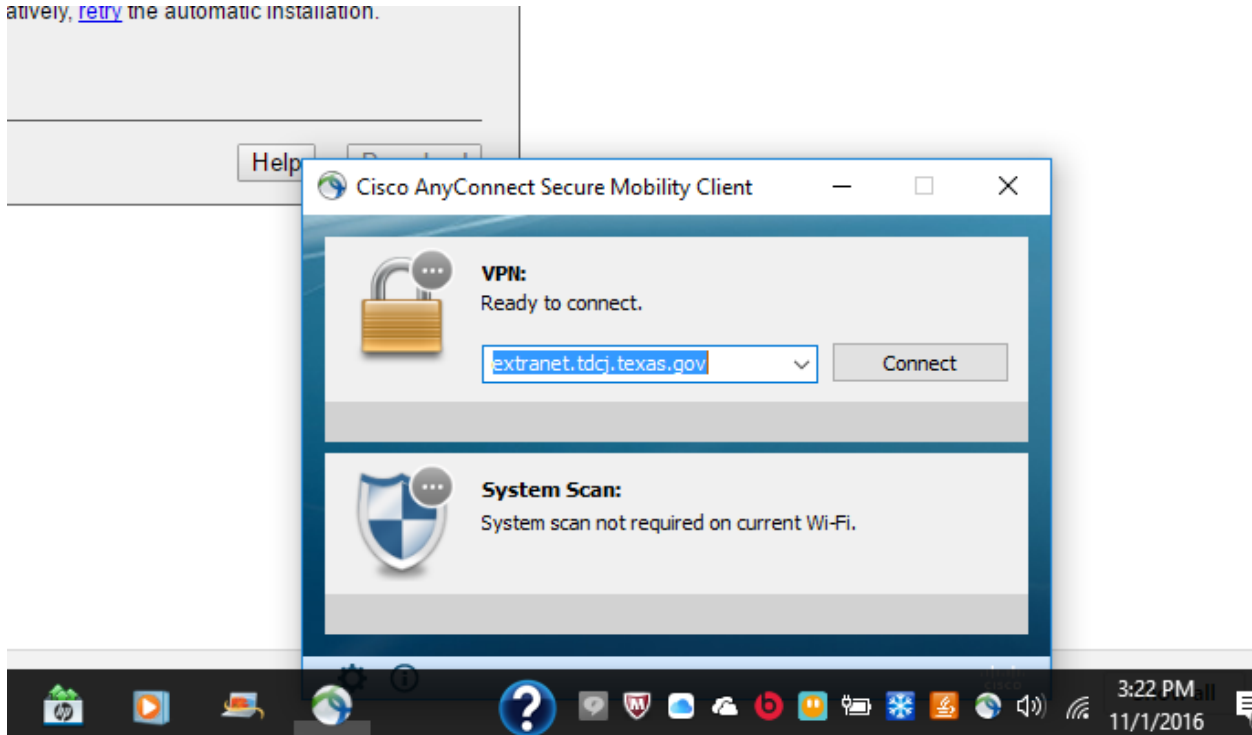

Alternatively, [retry](#) the automatic installation.

[Help](#) [Download](#)

Once installed you should get the Anyconnect client that looks like this in the lower right of you screen.

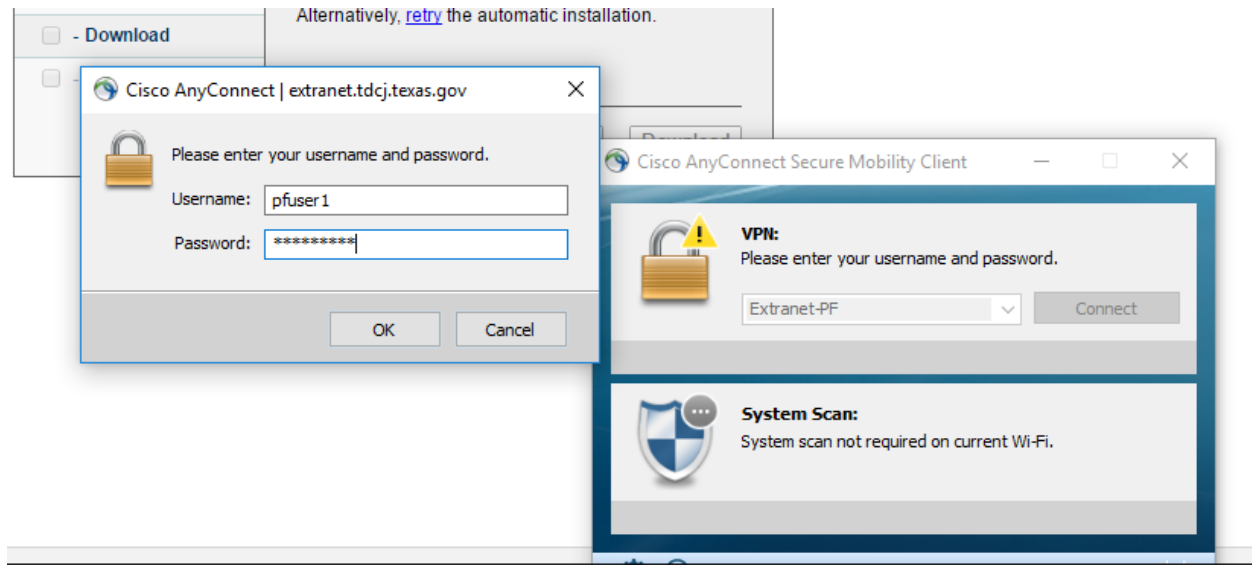

Alternatively, [retry](#) the automatic installation.

It should have extranet.tdcj.texas.gov in the “connect” window just as it shows above. If it is blank enter that into the blank field.

Then just click connect.

You will get this popup box to enter your credentials.

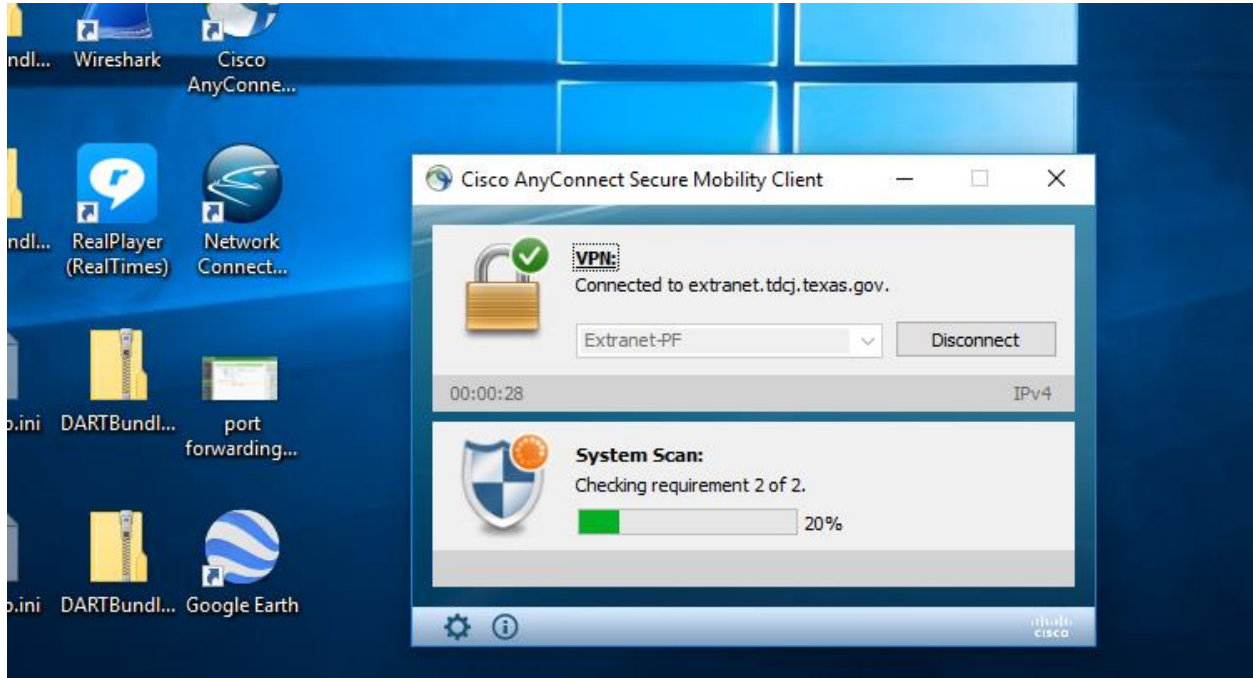

If you successfully authenticate you will get the TDCJ security banner page.

Click Accept

Anyconnect will then check your computer for up to date anti-virus and up to date Windows patches.

You will need to click on the small Anyconnect icon in the tool bar to see this check take place.

Once you have passed the posture check you will see compliant in the System scan status area.

This can be set to stay up and visible in the settings under the gear symbol. Just uncheck "Minimize Anyconnect on VPN connect" located under VPN/Preferences.

At this point you will be on the TDCJ network and should be able to access your authorized servers.

You should see the Cisco Anyconnect symbol appear with a padlock. This means you have a secure connection to TDCJ.

When you are finished, just click the Anyconnect icon and click Disconnect.

Click on this symbol whenever you need to open Anyconnect ↑
